

RNA layer

host-response / S100 high
MHC-II / CD74 / HLA-DR low
continuous immune-decoupling gradient

Paired association

COMBAT sepsis-only paired rows
representative co-event summary
matched RNA-CyTOF links

Cytometry context

raw-FCS all-pair background
marker-state summaries
matched control pairs

Interpretation scope

public-data immune-state map
representative cytometry-derived summary
pair-level specificity remains unresolved
prospective paired sampling needed before clinical translation
