

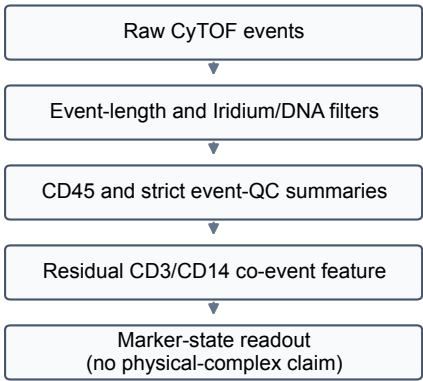

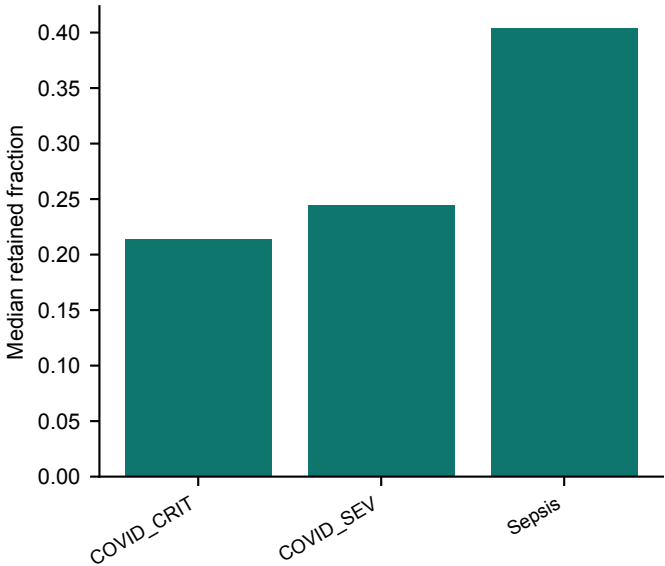

Figure 4. Residual CD3/CD14 co-event remodeling and artifact-control boundary

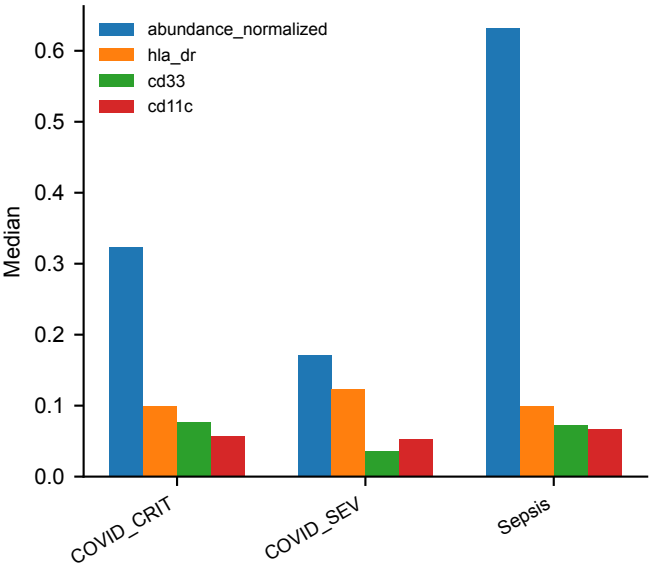

A. Pseudo-gating / event-QC schema

B. Strict event-QC summary

C. Frequency and marker-state readouts are separate

D. Negative-control feasibility

Control	Current status	Claim
CD3/CD19	FCS-level rerun needed	not claimed
CD3/CD56	FCS-level rerun needed	not claimed
CD14/CD16	marker context limited	not claimed
Random pairs	not available in summaries	future audit

Summary-level reuse supports a boundary audit, not completed event-level negative-pair validation.
